← Windows Features

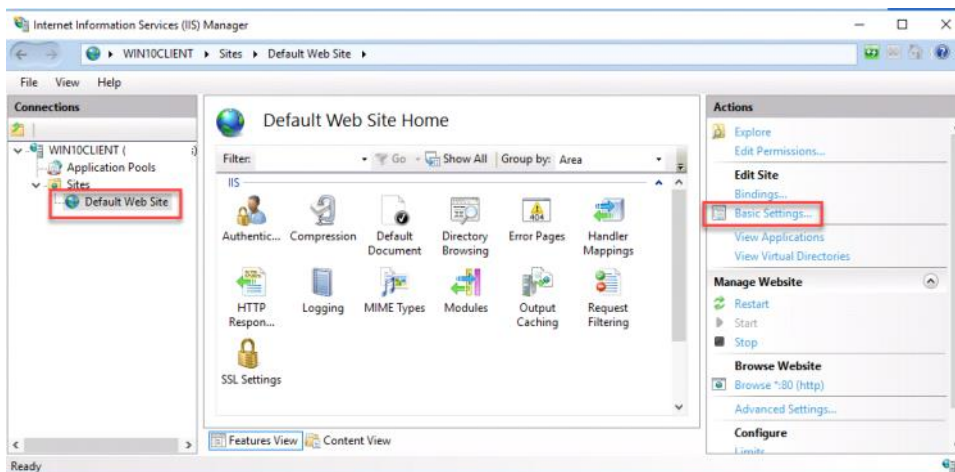

Windows completed the requested changes.

Point your browser to <http://localhost> You should see the IIS splash screen. This means IIS has been installed correctly.

To change your root web server folder, or make other IIS changes launch IIS manager from Windows Administrative tools > Internet Information Services.

Expand the local machine name > Sites and click on Default Web Site. On the right side, in the actions pane, click on basic settings.

Click the browse button to point to the folder where you're saving your class files (where your index.html file is located). Click Connect as and enter your user name and password. Then click Ok. Next, click test settings to make sure you can connect to the website root folder. Click close.

Edit Site ? X

Site name: Application pool:

Physical path:

Pass-through authentication

Connect As ? X

Path credentials:

☒ Specific user:

☐ Application user (pass-through authentication)

Test Connection ? X

Results:

Test	Setting
✓ Authentication	User name <input type="text"/>
✓ Authorization	Path is accessible (C:\Users\ \Desktop\GDIJavaScript...)

Details:

The specified user credentials are valid.
